AMENDMENTS TO THE CLAIMS

Claims 1-3. (Canceled)

Claim 4. (new) A biochemical vessel comprising a plate-like body having a plurality of through holes along a thickness thereof, and a substrate (B) bonded to one face of the plate-like body via an adhesive,

said substrate integrally forms projections which engage with edges of the respective through holes around the entire peripheries thereof.

- Claim 5. (new) The biochemical vessel of claim 4, wherein a cavity is formed in at least one of the bonding face of the plate-like body and the bonding face of the substrate, thereby to form a gap between the plate-like body and the substrate.
- Claim 6. (new) The biochemical vessel of claim 5, wherein said cavity is formed as an annulus surrounding an area where the plurality of through holes are formed.
